# Part 2 기본적인 기능의 게시물 관리

# Chapter 10 검색 처리와 동적 SQL

- 검색 처리는 페이징 처리 기능에 추가로 조회나 페이지 이동 시 유지해야 하는 데이터가 포함된다.
- 검색 처리에 가장 어려운 부분은 SOL문의 처리 영역이고 이 방법을 처리하기 위한 두 가지 방법
  - o 이를 처리하기 위해서 MyBatis의 동적 SQL(Dynamic SQL)을 이용
  - o @SelectProvider를 이용하는 방법 (어노테이션으로 처리하는 경우에만 사용)
- 개발 순서
  - o 화면과 관련된 컨트롤러, JSP 처리 -> MyBatis의 처리

## 10.1 검색에 필요한 데이터와 SearchCriteria

- 필수 사전정보
  - o 현재 페이지 번호(page)
  - o 페이지당 보여지는 데이터의 수(perPageNum)
  - o 검색의 종류(searchType)
  - o 검색의 키워드(keyword)
- SearchCriteria

```
public class SearchCriteria extends Criteria {
    private String searchType;
    private String keyword;

public String getSearchType() {
        return searchType;
    }

public void setSearchType(String searchType) {
        this.searchType = searchType;
    }

public String getKeyword() {
        return keyword;
    }

public void setKeyword(String keyword) {
        this.keyword = keyword;
    }

@Override
```

```
public String toString() {
    return "SearchCriteria [searchType=" + searchType + ", keyword=" + keyword + "]";
}
```

### 10.2 SearchBoardController의 작성

SearchBoardController

```
@Controller
@RequestMapping("/sboard/*")
public class SearchBoardController {
    private static final Logger logger = LoggerFactory.getLogger(SearchBoardController.class);
    @Inject
    private BoardService service;
    @RequestMapping(value = "/list", method = RequestMethod.GET)
    public void listPage(@ModelAttribute("cri") SearchCriteria cri, Model model) throws
Exception {
        logger.info(cri.toString());
        model.addAttribute("list", service.listCriteria(cri));
        PageMaker pageMaker = new PageMaker();
        pageMaker.setCri(cri);
        pageMaker.setTotalCount(service.listCountCriteria(cri));
        model.addAttribute("pageMaker", pageMaker);
    }
}
```

### 10.2.1 JSP 페이지의 준비

• listPage.jsp 복사해서 list로 사용

```
<!-- general form elements -->
             <div class="box">
                <div class="box-header with-border">
                    <h3 class="box-title">LIST ALL PAGE</h3>
                <div class="box-body">
                  >
                         BNO
                         TITLE
                         WRITER
                         REGDATE
                         VIEWCNT
                     <c:forEach items="${list}" var="boardV0">
                      ${boardV0.bno}
                         <a
href='/board/readPage${pageMaker.makeQuery(pageMaker.cri.page)}&bno=${boardV0.bno}'>${boardV0.ti}
tle}</a>
                         ${boardV0.writer}
                        <fmt:formatDate pattern="yyyy-MM-dd HH:mm"
value="${boardVO.regdate}" />
                         <span class="badge bg-red">${boardV0.viewcnt}</span>
                     </c:forEach>
                  </div>
                <!-- /.box-body -->
                <div class="box-footer">
                  <div class="text-center">
                     <c:if test="${pageMaker.prev}">
                            <a
href="listPage${pageMaker.makeQuery(pageMaker.startPage - 1)}">«</a> 
                         </c:if>
                         <c:forEach begin="${pageMaker.startPage}"</pre>
end="${pageMaker.endPage}" var="idx">
                           active':''}"/>>
                               <a href="listPage${pageMaker.makeQuery(idx)}">${idx}</a>
                            </c:forEach>
                         <c:if test="${pageMaker.next && pageMaker.endPage > 0}">
                            <a
```

```
href="listPage${pageMaker.makeQuery(pageMaker.endPage + 1)}">»</a> 
                            </div>
                    </div>
                     <!-- /.box-footer-->
                 </div>
            </div>
            <!--/.col (left) -->
        </div>
        <!-- /.row -->
    </section>
    <!-- /.contents -->
</div>
<!-- /.contents-wrapper -->
<form id="jobForm">
   <input type='hidden' name="page" value=${pageMaker.cri.page}>
   <input type='hidden' name="perPageNum" value=${pageMaker.cri.perPageNum}>
</form>
<script>
   var result = '${msg}';
   var pagePaker = '${pageMaker}'
    if(result === 'SUCCESS'){
        alert("처리가 완료되었습니다.");
   }
   console.log(pagePaker);
   /*$(".pagination li a").on("click", function(event){
       event.preventDefault();
       var targetPage = $(this).attr("href");
       var jobForm = $("#jobForm");
       jobForm.find("[name='page']").val(targetPage);
       jobForm.attr("action","/board/listPage").attr("method", "get");
       jobForm.submit();
   });*/
</script>
<%@include file="../include/footer.jsp"%>
```

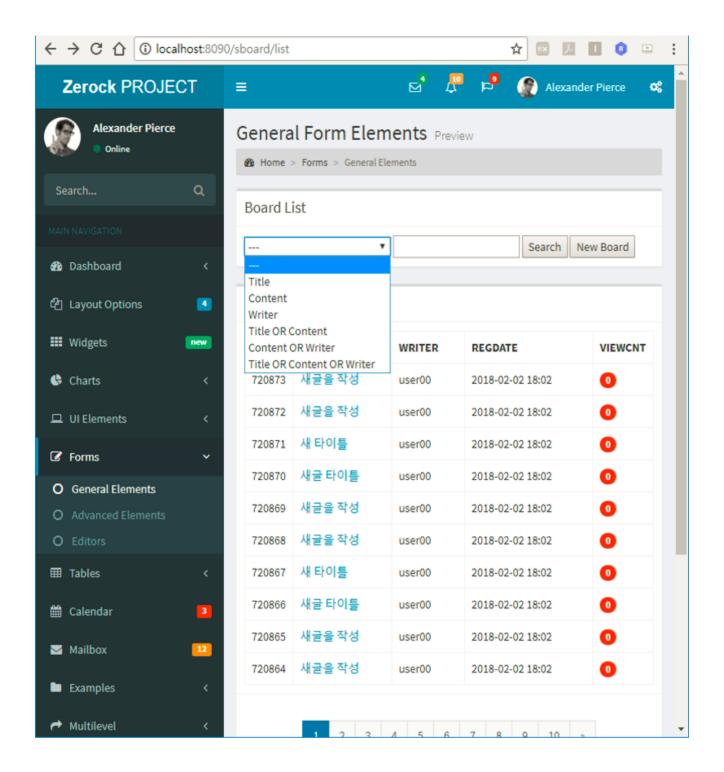

## 10.3 검색에 필요한 JSP 수정

• list.jsp

```
<div class = "box">
  <div class="box-header with-border">
     <h3 class="box-title">Board List</h3>
  </div>
<div class="box-body">
```

```
<select name="searchType">
      <option value = "n"</pre>
              <c:out value="${cri.searchType == null ? 'selected' : ''}"/>>---
      </option>
      <option value = "t"</pre>
              <c:out value="${cri.searchType eq 't' ? 'selected' : ''}"/>>Title
      </option>
      <option value = "c"</pre>
              <c:out value="${cri.searchType eq 'c' ? 'selected' : ''}"/>>Content
      </option>
      <option value = "w"</pre>
              <c:out value="${cri.searchType eq 'w' ? 'selected' : ''}"/>>Writer
      </option>
      <option value = "tc"</pre>
              <c:out value="${cri.searchType eq 'tc' ? 'selected' : ''}"/>>Title OR Content
      </option>
      <option value = "cw"</pre>
              <c:out value="${cri.searchType eq 'cw' ? 'selected' : ''}"/>>Content OR Writer
      </option>
      <option value = "tcw"</pre>
              <c:out value="${cri.searchType eq 'tcw' ? 'selected' : ''}"/>>Title OR Content OR
Writer
      </option>
    </select>
  <input type="text" name="keyword" id="keywordInput" value="${cri.keyword}"/>
 <button id="searchBtn">Search/button>
  <button id="newBtn">New Board</putton>
 </div>
</div>
```

• 검색 리스트, 키워드 항목 확인

## 10.3.1 searchType과 keyword 링크 처리

PageMaker

```
public String makeSearch(int page) {
   UriComponents uriComponents = UriComponentsBuilder.newInstance()
        .queryParam("page", page)
        .queryParam("perPageNum", cri.getPerPageNum())
        .queryParam("searchType", ((SearchCriteria) cri).getSearchType())
        .queryParam("keyword", encoding(((SearchCriteria) cri).getKeyword())).build();
   return uriComponents.toUriString();
}
```

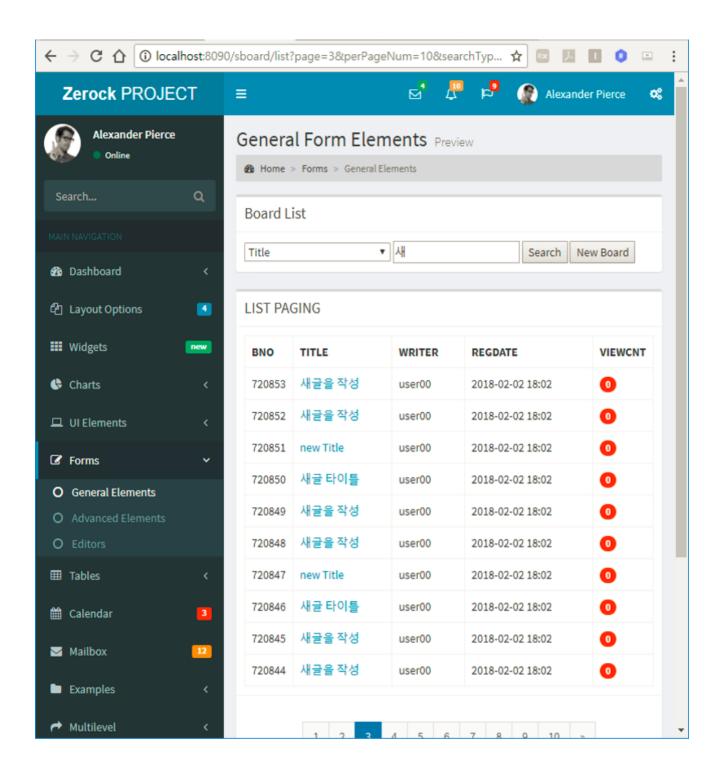

```
private String encoding(String keyword) {
  if(keyword == null || keyword.trim().length() == 0) {
    return "";
  }
  try {
    return URLEncoder.encode(keyword, "UTF-8");
  }catch(UnsupportedEncodingException e) {
    return "";
  }
}
```

list.jsp

#### 10.3.1.1 브라우저를 통한 검색과 페이징 확인

- URL에 searchType과 keyword를 작성하여 결과 페이지 키워드 영역에 keyword에 입력한 값이 출력되었는지 확인
- list.jsp

http://localhost:8090/sboard/list?page=3&perPageNum=10&searchType=t&keyword=새

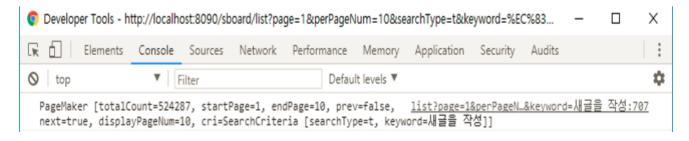

- 조회 페이지로의 이동 경로 처리 list
- readPage 작성후 확인 가능

#### 10.3.2 검색 버튼의 동작 처리

list.jsp

```
<script>
 $(document).ready(
   function() {
     $('#searchBtn').on("click"
                        , function (event) {
       self.location = "list"
         + '${pageMaker.makeQuery(1)}'
         + "&searchType="
         + $("select option:selected").val()
         + "&keyword=" + encodeURIComponent($('#keywordInput').val());
       alert("되니");
     $('#newBtn').on("click", function(evt) {
       self.location = "register";
     });
   });
</script>
```

• 검색 조건과 키워드가 페이지 이동 시 같이 적용되는지 확인

## 10.4 MyBatis 동적 SQL

• 동적 SOL 작성 단계

- o 동적 SQL의 적용이 필요한 메서드의 설정
- o XML Mapper를 이용한 SQL 문 처리
- o 동적 SQL 문의 생성 확인 및 테스트

#### 10.4.1 BoardDAO의 수정

- BoardDAO
- SearchCriteria를 사용하기 위한 메서드 추가
  - o page(Criteria에서 상속된 속성)
  - o perPageNum(Criteria에서 상속된 속성)
  - o searchType(검색 조건)
  - o keyword(검색 키워드)

```
public List<BoardVO> listSearch(SearchCriteria cri) throws Exception;
public int listSearchCount(SearchCriteria cri) throws Exception;
```

### 10.4.2 XML Mapper 수정

• boardMapper.xml

```
<select id="listSearch" resultType="BoardV0">
<![CDATA[
SELECT
FROM
 tbl board
WHERE
 bno > 0
ORDER BY
 bno DESC
LIMIT #{pageStart}, #{perPageNum}
]]>
</select>
<select id="listSearchCount" resultType="int">
SELECT
 count(bno)
FROM
 tbl board
WHERE
 bno > 0
11>
</select>
```

### 10.4.3 BoardDAOImpl의 수정

BoardDAOImpl

```
@Override
public List<BoardVO> listCriteria(Criteria cri) throws Exception {
   return dao.listCriteria(cri);
}

@Override
public int listCountCriteria(Criteria cri) throws Exception {
   return dao.countPaging(cri);
}
```

#### 10.4.4 BoardDAO의 테스트

BoardDAOTest

```
@Test
public void testDynamic1() throws Exception {
    SearchCriteria cri = new SearchCriteria();
    cri.setPage(1);
    cri.setKeyword("글");
    cri.setSearchType("t");
    logger.info("=========");

List<BoardVO> list = dao.listSearch(cri);
    for(BoardVO boardVO : list) {
        logger.info(boardVO.getBno() + ":" + boardVO.getTitle());
    }
    logger.info("============");
    logger.info("COUNT : " + dao.listSearchCount(cri));
}
```

• Test 결과

```

### 10.4.5 동적 SQL 문의 추가

• boardMapper.xml (listSearch수정)

```
and writer like CONCAT('%', #{keyword}, '%')
   </if>
   <if test="searchType == 'tc'.toString()">
     and (title like CONCAT('%', #{keyword}, '%') OR content like CONCAT('%', #{keyword},
'%'))
   </if>
   <if test="searchType == 'cw'.toString()">
     and (content like CONCAT('%', #{keyword}, '%') OR writer like CONCAT('%', #{keyword},
'%'))
   </if>
   <if test="searchType == 'tcw'.toString()">
     and ( title like CONCAT('%', #{keyword}, '%')
     content like CONCAT('%', #{keyword}, '%')
     writer like CONCAT('%', #{keyword}, '%'))
   </if>
 </if>
 <![CDATA[
ORDER BY
 bno DESC
LIMIT #{pageStart}, #{perPageNum}
11>
</select>
```

결과

```
INFO : jdbc.sqlonly - SELECT * FROM tbl_board WHERE bno > 0 and title like CONCAT('%', '글', '%') ORDER BY bno DESC
LIMIT 0, 10
```

#### 10.4.5.1 와

- 태그를 이용해서 동일한 SOL 구문을 재사용하는 방법
- boardMapper.xml

```
'%'))
    </if>
    <if test="searchType == 'cw'.toString()">
        and ( content like CONCAT('%', #{keyword}, '%') OR writer like CONCAT('%', #{keyword},
'%'))
    </if>
    <if test="searchType == 'tcw'.toString()">
        and ( title like CONCAT('%', #{keyword}, '%')
        OR
        content like CONCAT('%', #{keyword}, '%')
        OR
        writer like CONCAT('%', #{keyword}, '%'))
        </if>
        </if>
        </if>
        </if>
        </if>
        </sql>
```

boardMapper.xml

```
<select id="listSearch" resultType="BoardV0">
 <![CDATA[
SELECT
 *
FROM
 tbl board
WHERE
 bno > 0
]]>
 <include refid="search"></include>
 <![CDATA[
ORDER BY
 bno DESC
 LIMIT #{pageStart}, #{perPageNum}
11>
</select>
<select id="listSearchCount" resultType="int">
 <![CDATA[
SELECT
 count(bno)
FROM
 tbl_board
WHERE
 bno > 0
11>
 <include refid="search"></include>
</select>
```

# 10.5 BoardService와 SearchBoardController의 수정

BoardService

```
public List<BoardVO> listSearchCriteria(SearchCriteria cri) throws Exception;
public int listSearchCount(SearchCriteria cri) throws Exception;
```

BoardServiceImpl

```
@Override
public List<BoardVO> listSearchCriteria(SearchCriteria cri) throws Exception {
    return dao.listSearch(cri);
}

@Override
public int listSearchCount(SearchCriteria cri) throws Exception {
    return dao.listSearchCount(cri);
}
```

SearchBoardController

```
@RequestMapping(value = "/list", method = RequestMethod.GET)
public void listPage(@ModelAttribute("cri") SearchCriteria cri, Model model) throws Exception {
   logger.info(cri.toString());

   // model.addAttribute("list", service.listCriteria(cri));
   model.addAttribute("list", service.listSearchCriteria(cri));
   PageMaker pageMaker = new PageMaker();
   pageMaker.setCri(cri);

   // pageMaker.setTotalCount(service.listCountCriteria(cri));
   pageMaker.setTotalCount(service.listSearchCount(cri));
   model.addAttribute("pageMaker", pageMaker);
}
```

## 10.6 조회, 수정, 삭제 페이지의 처리

#### 10.6.1 게시물의 조회 처리

SearchBoardController

```
@RequestMapping(value = "/readPage", method = RequestMethod.GET)
public void read(@RequestParam("bno") int bno, @ModelAttribute("cri") SearchCriteria cri, Model
model) throws Exception {
   model.addAttribute(service.read(bno));
}
```

readPage.jsp

readPage.jsp

```
<script>
   $(document).ready(function () {
        var formObj = $("form[role='form']");
        console.log(formObj);
        $(".btn-warning").on("click", function () {
           formObj.attr("action", "/sboard/modify");
           formObj.attr("method", "get");
           formObj.submit();
        });
        $(".btn-danger").on("click", function () {
           formObj.attr("action", "/sboard/remove");
           formObj.submit();
        $(".btn-primary").on("click", function () {
            self.location = "/sboard/listAll";
        });
        $(".goListBtn").on("click", function () {
            formObj.attr("method", "get");
            formObj.attr("action", "/sboard/listPage");
            formObj.submit();
        });
        $(".removeBtn").on("click", function () {
            formObj.attr("action", "/sboard/removePage");
            formObj.submit();
        });
        $(".modifyBtn").on("click", function () {
            formObj.attr("action", "/sboard/modifyPage");
            formObj.attr("method", "get");
            formObj.submit();
        });
   });
</script>
```

#### 10.6.2 게시물의 삭제 처리

• SearchBoardController

```
@RequestMapping(value = "/removePage", method = RequestMethod.POST)
public String remove(@RequestParam("bno") int bno, SearchCriteria cri, RedirectAttributes rttr)
throws Exception{
    service.remove(bno);

    rttr.addAttribute("page", cri.getPage());
    rttr.addAttribute("perPageNum", cri.getPerPageNum());
    rttr.addAttribute("searchType", cri.getSearchType());
    rttr.addAttribute("keyword", cri.getKeyword());

    rttr.addFlashAttribute("msg", "SUCCESS");
    return "redirect:/sboard/list";
}
```

#### 10.6.3 게시물의 수정 처리

SearchBoardController

```
@RequestMapping(value = "/modifyPage", method = RequestMethod.GET)
public void modifyPagingGET(int bno, @ModelAttribute("cri") SearchCriteria cri, Model model)
throws Exception {
 model.addAttribute(service.read(bno));
}
@RequestMapping(value = "/modifyPage", method = RequestMethod.POST)

## 10.7 등록 페이지 처리

SearchBoardController

```
@RequestMapping(value = "/register", method = RequestMethod.GET)
public void registGET() throws Exception {

   logger.info("regist get .....");
}

@RequestMapping(value = "/register", method = RequestMethod.POST)
public String registPOST(BoardVO board, RedirectAttributes rttr) throws Exception {

   logger.info("regist post .....");
   logger.info(board.toString());

   service.regist(board);

   rttr.addFlashAttribute("msg", "SUCCESS");

   return "redirect:/sboard/list";
}
```

• board/register -> sboard/register 복사

### 10.8 최종적인 결과 확인

- 검색 조건 테스트
- 조회 페이지에서 검색 조건 유지 테스트
- 삭제 작업 이후 검색 조건 유지 테스트
- 수정 작업 이후 검색 조건 유지 테스트

## 10.9 정리

- 개발 환경의 준비 및 데이터베이스 준비
- 새로운 게시물을 등록 할 수 있는 기능 개발
- 전체 목록 기능 개발
- 조회 기능 개발
- 삭제 기능 개발
- 수정 기능 개발
- 페이징처리
- 검색 처리
- 미흡한 부분
  - o 예제를 단순화 하기 위해서 스프링의 Validation기능을 사용하지 못한 점
  - o JAvaScript를 이용해서 엄격한 태그의 입력 항목들을 체크하지 못한 점
  - ㅇ 트랜잭션 관리
